vctl - A CLI tool for the Nautilus Container Engine powered by VMware Fusion
vctl Highlights:
• Build and run OCI containers.
• Push and pull container images between remote registries & local storage.
• Use a lightweight virtual machine (CRX VM) based on VMware Photon OS to host a container.
• Easy shell access into virtual machine that hosts container. See 'vctl execvm'.

USAGE:
  vctl COMMAND [OPTIONS]

COMMANDS:
  build       Build a container image from a Dockerfile.
  create      Create a new container from a container image.
  describe    Show details of a container.
  exec        Execute a command within a running container.
  execvm      Execute a command within a running virtual machine that hosts container.
  help        Help about any command.
  images      List container images.
  ps          List containers.
  pull        Pull a container image from a registry.
  push        Push a container image to a registry.
  rm          Remove one or more containers.
  rmi         Remove one or more container images.
  run         Run a new container from a container image.
  start       Start an existing container.
  stop        Stop a container.
  system      Manage the Nautilus Container Engine.
  tag         Tag container images.
  version     Print the version of vctl.

Run 'vctl COMMAND --help' for more information on a command.

OPTIONS:
  -h, --help   Help for vctl
```
